Script 3: National Weather Service XML - USA users

Uses the NWS xml page. It provides forecast for a week.

Go to

`http://nws.noaa.gov/`

Type your location on the upper left searchbox and hit enter.

You will be redirected to a page with the forecast - scroll down the page until you find the orange XML button.

Right click it and choose 'Copy Link Address'. Paste it somewhere.

Put the conky_forecast_nws folder in your home folder.

Navigate inside the folder and make the script executable:
Either by right clicking it or by

```
chmod +x ~/conky_forecast_nws/NWSforecast.sh
```

Open the script with your favourite text editor and replace my location's address at the wget command with yours.

You can intergrate the .conkyrc_nws into your own .conkyrc file or run it individually with

```
conky -c /path/.conkyrc_nws
```
